

CHARAN BS

Data Analyst & AI-Driven Insights Developer

Email : charan201204@gmail.com

Phone : +91 91130 10019

Location : Hassan, Karnataka

Portfolio : charan-bs-website.onrender.com

GitHub : github.com/CharanBS18

LinkedIn : linkedin.com/in/charan-bs-b34975391

PROFESSIONAL SUMMARY

Aspiring Data Analyst with a solid foundation in Python, data wrangling, statistical analysis, and AI-powered data applications. Experienced in collecting, cleaning, transforming, and visualising large datasets to extract actionable insights. Demonstrated ability to build and deploy data-driven applications — including a live AI diagnostic tool powered by a full RAG pipeline. Passionate about turning raw data into clear, compelling stories that drive informed decision-making.

EDUCATION

Bachelor of Engineering (AI & ML)

Rajeev Institute of Technology

Hassan, Karnataka

Relevant Coursework: Statistics & Probability, Data Structures, DBMS, Machine Learning, Data Visualisation, Python Programming

TECHNICAL SKILLS

Data Analysis & Processing

Python	Pandas	NumPy	SQL
Data Cleaning	Data Wrangling	Feature Engineering	Statistical Analysis

Visualisation & Reporting

Matplotlib	Seaborn	Plotly	Power BI
Excel	Google Sheets	Dashboarding	Storytelling with Data

AI / ML & Databases

scikit-learn	LangChain	RAG Pipelines	OpenAI APIs
Vector Databases	MySQL	MongoDB	REST APIs

Tools & Platforms

Jupyter Notebook	Streamlit	Git / GitHub	Google Colab
Render / Vercel	Figma	Canva	Adobe Express

PROJECTS

Plant Health RAG — AI Data Pipeline & Diagnostic Application

Tech / Tools: Python, Pandas, LangChain, RAG, OpenAI API, Vector DB, Streamlit, Deployed on Render

- Collected, cleaned, and preprocessed agricultural domain datasets for use in a production AI diagnostic pipeline.
- Built a complete RAG data pipeline: document ingestion, text chunking, embedding generation, vector storage, and semantic retrieval.
- Integrated OpenAI API for LLM-based answer generation grounded in structured domain knowledge.
- Deployed as a live Streamlit application used by real end-users for plant disease identification.

- Performed output evaluation and iterative optimisation of retrieval parameters to improve diagnostic accuracy.
- Live: planthealthrag-fsggg4j6desaboqkfomqeb.streamlit.app

Lumina Volt — EV Station Data Integration & Visualisation

Tech / Tools: Python, REST APIs, Geolocation API, Data Processing, JavaScript

- Integrated and processed real-time station availability data via REST APIs for geolocation-based analysis.
- Performed distance calculations and route optimisation logic to surface nearest relevant stations to users.
- Designed an interactive data visualisation frontend with 3D route rendering for intuitive data presentation.
- Live: charanbs18.github.io/EV-project-PPT

Exploratory Data Analysis — Personal Projects & Experiments

Tech / Tools: Python, Pandas, NumPy, Matplotlib, Seaborn, Jupyter Notebook

- Conducted end-to-end EDA on multiple datasets — handling missing values, outlier detection, and data transformation.
- Created detailed visualisation reports using Matplotlib and Seaborn to surface patterns, correlations, and trends.
- Applied statistical methods including hypothesis testing, correlation analysis, and distribution fitting.

SOFT SKILLS

Analytical Thinking	Attention to Detail	Problem Solving	Data Storytelling
Communication	Self-Directed Learning	Collaboration	Adaptability

LANGUAGES

English — Professional	Kannada — Native	Hindi — Conversational
